Vienna Instruments
Clarinet in Bb II

Contents

Introduction

Welcome to the Vienna Symphonic Library, and thank you for purchasing one of our Vienna Instruments! This document contains the mapping information for the Clarinet in Bb II. You will find in it a comprehensive survey of the articulations/Patches content and the mapping list proper which gives details for every Patch, Matrix, and Preset.

Patch information

The Patch information includes articulation type, playing range, number of samples used, RAM requirements, the number of velocity layers and alternations, AB switching possibilities, etc., as well as Patch specific information if necessary. Here's an overview of the articulations/Patches contained in the Clarinet in Bb II Collection:

Short and long notes: Staccato; portato short, portato medium without and with vibrato; sustained without, with normal and progressive vibrato; flutter tonguing normal and crescendo
Dynamics: Light and strong dynamics without and with vibrato, 2/3/4 sec.; crescendo-diminuendo without and with vibrato, 2/4/6 sec.; fortepiano, sforzato, sforzatissimo without and with vibrato
Interval performances: Legato without and with vibrato; trills, minor 2nd to 4th (all other intervals legato)
Performance repetitions: Legato without and with vibrato; portato; staccato; normal and crescendo

Interval performances

Interval performances are one of the outstanding features of our Vienna Instruments. They allow you to play authentic legato without any programming tricks. In our Silent Stage, all intervals from minor second to the octave were recorded for every instrument – up and down, of course; that makes 24 interval samples per note for one velocity alone! When you load an interval performance Patch and play a line on your keyboard, the software automatically joins the right samples with their interval transitions again, and you hear a perfect legato. By the way, this technique is not only used for legato but also for other articulations like glissandos and clusters.

Interval performances also contain at least two legato repetitions for every note which alternate automatically whenever you strike a key more than once. There also are preconfigured thresholds for legato and repetition notes: The legato threshold – i.e., the maximum break between notes where legato is played – is 50 ms. Otherwise, a sustained starting note will sound so that you can easily start a new phrase without leaving the legato Patch. For note repetitions, the threshold is 200 ms: a break up to that duration will yield a legato repetition; if the break is longer, a new starting note. But naturally, it's mingling legato with other articulations which makes a piece really come alive.

Matrix information

Each Matrix listing contains information regarding the Patches used for the Matrix, the number of horizontal and vertical dimensions, and switching properties. A mapping table shows the Cell positions for each of the Matrix' Patches.

In order to facilitate working with **MIDI controller switches** such as the Modulation wheel, the switching positions are not distributed equally across the controller range if they control more than two Matrix rows or columns; the switching range will be narrower at extreme positions, and wider in the middle where it is harder to find the desired setting.

Pitch

For designating pitch, the Vienna Symphonic Library uses International Pitch Notation (IPN), which was agreed upon internationally under the auspices of the Acoustical Society of America. In this system the international standard of A=440 Hz is called A4 and middle C is C4. All pitches are written as capital letters, their respective octave being indicated by a number next to it. The lowest C on the piano is C1 (the A below that is A0), etc.

You can tune your Vienna Instruments to other players, or adjust it to tunings of earlier musical periods by setting the Perform page's Master Tune option within a range of 420 to 460 Hz.

Level 2: Double-sound multiphonics, var. 1–4
Multiple-sound multiphonics, var. 1–7
Multiphonics by underblowing
Flaps (key clicks), tongue slaps
Falls and bends

Multiphonics describes a modern fingering and blowing technique which makes it possible to play two or more notes at the same time. Playing more than three notes simultaneously is extremely difficult.
The clarinet is blown in such a way that a partial (or several partials) of the fingered note speaks as well, or that only the partials sound. Multiphonics range from harmonic multiphonics (sounds that develop from a prime tone and harmonic partials) to sounds with inharmonic partials and complex sounds consisting predominantly of noise components.
Multiphonics are produced by using special fingerings and changing the force of attack at the same time or by using conventional fingerings with a radically altered embouchure. On the clarinet changing the force of attack plays a particularly important role. The instrument is often held experimentally in different positions.
Fingering charts for multiphonics can produce different results on different types of clarinet and must therefore be tried out.

01 KLB2_Multiphonics_DS1 (2/3/4) **Range: C#4–A6** **Samples: 81** **RAM: 5 MB** **Level 2**

Double-sound multiphonics, var. 1–4
The samples are mapped to their lowest sounding note, corresponding with their mapping from C#4 to A4. The two other sections have the same base notes but higher partials. The patches from 1 to 4 increase in sharpness of tone.
